Canine Neuter (> 40kg)

What is a Neuter (Orchidectomy)?

A neuter involves removal of both testicles. This is done through a small incision made just in front of the scrotum. All dogs are sent home with pain control medication. Most animals tolerate this procedure well and return to their normal activity within 2-3 days. We recommend keeping a cone on (or old pair of boxers) until the incision is fully healed, 2 weeks after surgery.

Why is it important to get my dog Neutered?

Benefits of a neuter include:

- Decrease unwanted pregnancies and surplus animal population
- Prevent prostate infections that can be fatal
- Prevent testicular cancer
- Decrease marking, wandering, and territorial behaviors
- Decrease inter-dog aggression

Please speak to your vet
about neuter timing for
larger dogs.

What is the cost of a Dog Neuter? (>40kg)

Pre-Surgery Package		Surgery Package	
Pre-Operative wellness exam	\$120	Neuter surgery bundle	\$390
